

## Please review the following important instructions

### Drive tray installation procedures

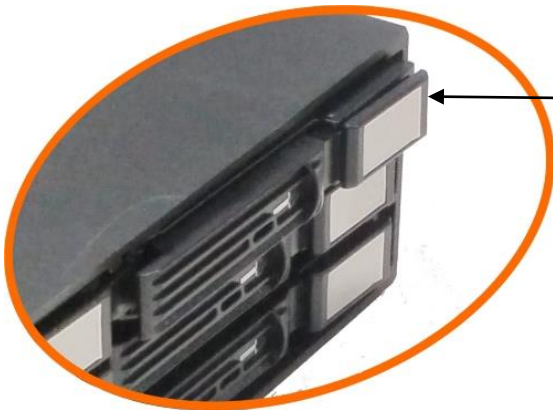

Be sure the tray lever is fully opened when the tray is inserted into the drive slot

The tray must be all the way inside the slot as shown in this picture before closing the tray lever.

The tray is not fully inserted inside the drive slot. Closing the tray lever will result in loose or no electrical connection to the drive.

**DO NOT push the drive tray into the drive slot with force if the drive tray sticks out as shown in this picture.** This could damage the latch. The tray lever may fail to eject when pull on the latch.

You need to pull on the latch to eject the tray lever. Open the lever all the way so you can insert the tray fully into the drive slot as shown above.
