### Connection illustration

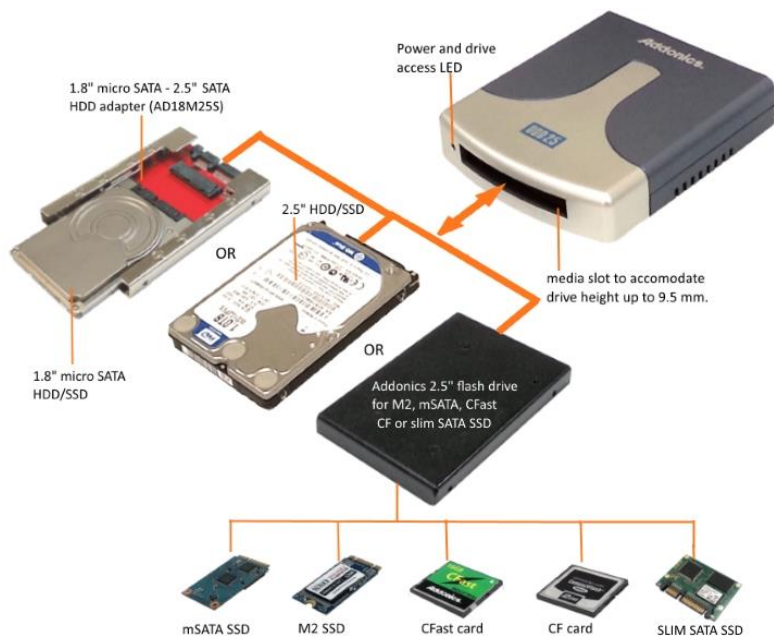

(shown with a 2.5" HDD inserted inside the Pocket UDD25)

### Rear view

### Supported storage media

### Hot Swapping

This unit supports hot swapping (inserting or removing drive while the drive is running and connected to a computer). When connected using eSATA, the controller on the computer must also support hot swapping - be sure to confirm this before attempting to insert or remove drive while the system is running. Also be sure to practice the appropriate safe removal procedure before proceeding. Failure to practice safe removal procedures could result in loss or corruption of data.

### Package content:
