### Accessories

## Connecting to computer

### eSATA connection

Before connecting the Sapphire Blu-ray/DVD writer to a computer using eSATA, check to make sure the computer's eSATA port supports hot swapping. If the eSATA port does not support hot swapping, connecting or disconnecting the Blu-ray/DVD writer or turning the device on and off while the computer is running may cause the computer to crash.

Once the computer completed detecting the device, an optical drive icon will appear in MY COMPUTER under Windows OS. The Blue-ray/DVD writer behaves like an internal optical drive and can be used for booting a computer with bootable CD or DVD disc.

### USB connection

Connect the Sapphire Blu-ray/DVD writer to the USB port of the computer using the included USB 3.0 cable. Power on the device and in a few moment an optical drive icon will appear in My COMPUTER under Windows OS.

There is no driver required in either eSATA or USB connection.
