Ruby Mobile Rack RMRSAI & RMRSASC

User's Guide

Version 1.0

FCC Warning Statement

This equipment has been tested and found to comply with the limits for a class B digital device pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy. If not installed and used in accordance with the instructions, it may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If the equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment on and off, the user is encouraged to try and correct the interference by one or more of the following suggestions.

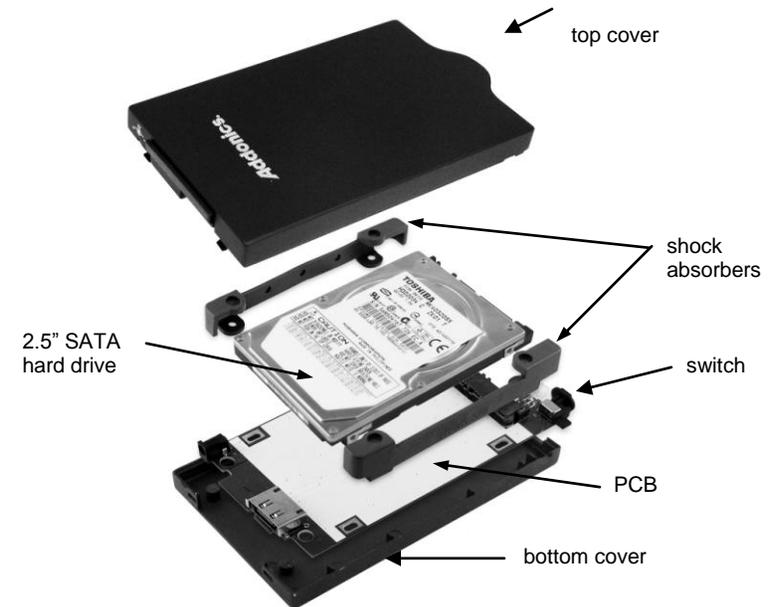

Reorient or relocate the receiving antenna

Increase the distance between the equipment and the receiver

Connect the equipment to a different power outlet other than the one where receiver is connected

Consult a certified television or radio technician

Enclosure Overview

Step 1 Separate the top from the bottom cover of the drive enclosure by loosening the screw as shown on the photo.

Step 2 Align the SATA connector in the 2.5" hard drive with the SATA connector on the PCB.

Step 3 Wrap the shock absorbers around the hard drive and PCB.

Step 4 Turn over the PCB and secure the hard drive to the PCB with the mounting screws that come with the kit.

Step 5 Mount the board to the bottom cover.

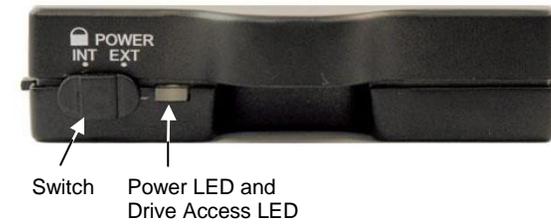

Step 6 Put the top cover on by holding it in near vertical position and sliding the two metal clips inside the two small slots on the rear of the bottom cover.

Step 7 Lower the front of the top cover and making sure the two covers lined up properly. Tighten the small retaining screw on the front of the bottom cover to close the enclosure.

Ruby Enclosure

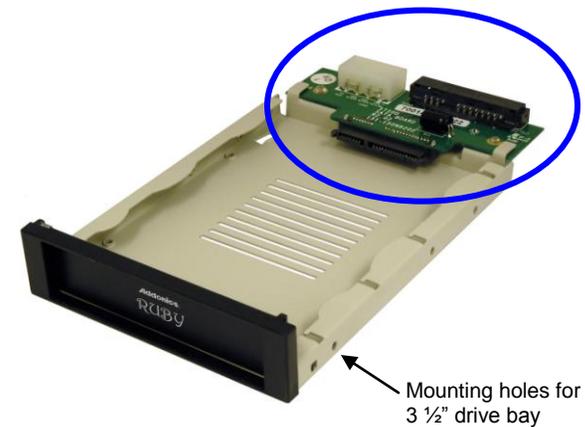

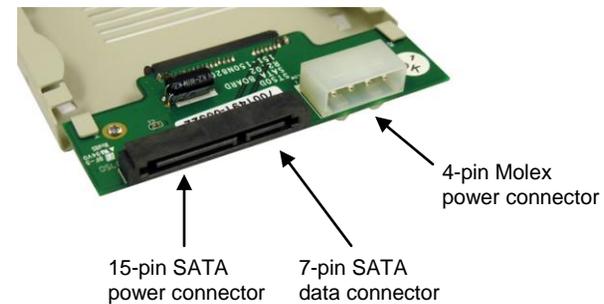

Switch:

INT: This mode is used when the enclosure is placed inside a drive cradle. For mobile rack kits, this is the mode used.

EXT: This mode is used if the enclosure is used as an external hard drive.

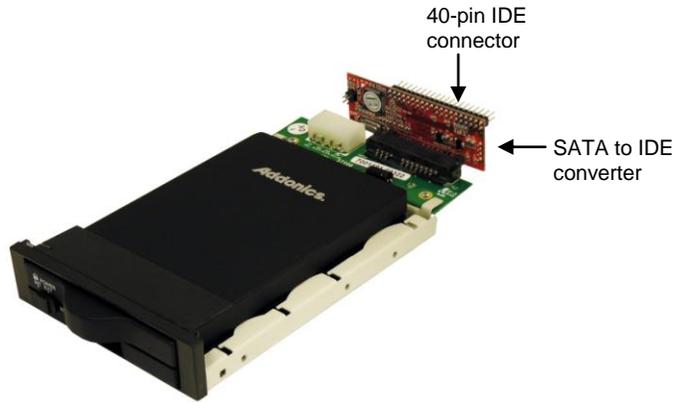

Ruby Drive Cradle

Note: You can only use one power connector at a time. Either use the 4-pin Molex or 15-pin SATA connector but do not simultaneously use them.

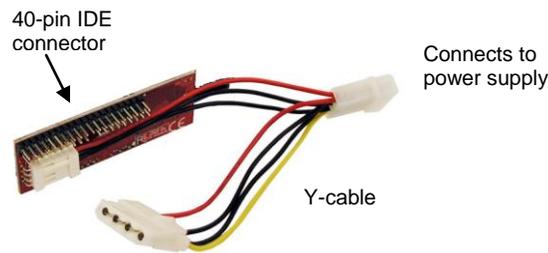

Model: **RMRSAI**

This Ruby model will not hot-swap. Slide the Ruby enclosure inside the cradle and then place switch on INT position before the system can be turned ON.

Step 1: Connect the SATA to IDE converter to the SATA interface of the cradle.

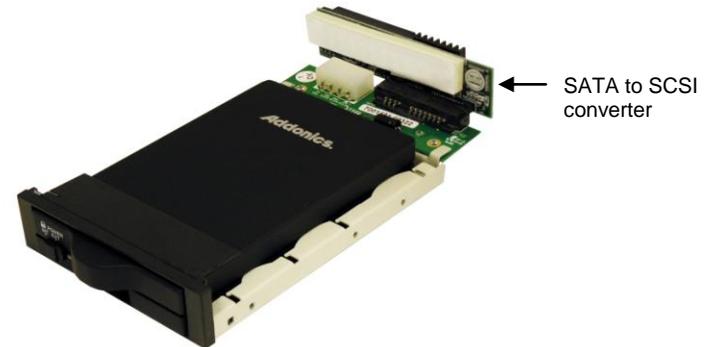

Step 2: Connect the Y-cable that came with converter to the 4-pin floppy connector on the converter. The other end would connect to your system's power supply. This power connection provides power to both converter and the ruby mobile rack.

Step 3: Attach the IDE ribbon cable connected to your IDE primary channel to the 40-pin connector on the adapter.

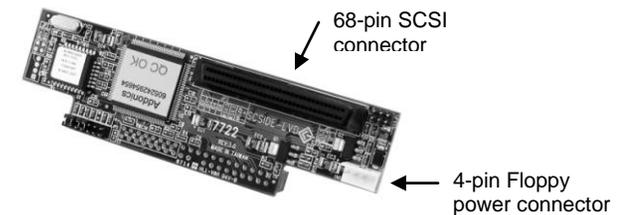

Model: **RMRSASC**

This Ruby model will not hot-swap. Slide the Ruby enclosure inside the cradle and then place switch on INT position before the system can be turned ON.

Step 1: Connect the SATA to SCSI converter to the SATA interface of the cradle.

Step 2: Connect the Y-cable that came with converter to the 4-pin floppy connector on the converter. The other end would connect to your system's power supply. This power connection provides power to both converter and the ruby mobile rack.

Step 3: Attach the SCSI ribbon cable connected to your SCSI host adapter to the 68-pin connector on the adapter.

Technical Support

If you need assistance to get your unit functioning properly, please call Addonics Technical Support. Our technical staff will be happy to assist you, but they will need your help to do so. Calling the technical support staff without all the proper information can be both time consuming and frustrating. Here are some tips to help you out:

MODEL NUMBER – Please have this number on hand.
SYSTEM INFORMATION – Type of computer, peripherals, etc.
OPERATING SYSTEM – What version of Windows
WHAT'S THE TROUBLE? – Give enough information
about your problem so that we can recreate and diagnose it.

**FREE Software Drivers for all Addonics Technologies
Products are available 24 hours per day at the
World Wide Web Site: www.addonics.com.**
