

## Default settings on the duplicator:

**Copy** – set to WHOLE MEDIA. This setting copies everything in the source drive to the target drive sector by sector. This setting ensures a good copy of any drives: boot drive, blank drive, encrypted drive or drive with any file system.

To speed up the copying, you may change the setting to SYSTEM and FILES. This setting skips copying sectors with no recognizable data. This is only for drives that have the following file system: NTFS, FAT/16/32, exFAT, HFS, EXT3/4 or XFS. This setting is not recommended for copying boot drive as certain boot sectors may not be copied correctly.

**Performance** – set to SPEED for best performance. May encounter compatibility issue with certain old model HDD. Should that occur, try to change the setting to BALANCE or COMPATIBILITY.

Please review the High-Speed duplicator Controller user manual for all the detail settings.

## Making duplicates

Power up the unit by pressing on the ON/OFF button at the front lower right-hand corner. Once the unit is ready, the LCD should display

### HDD Duplicator

#### 1. Copy

The unit is now ready. Simply loads a source drive to the source slot (the first bay on the left) and the target drives to the four target slots (the four bays on the right). After a few seconds, the LCD should display the number of target drives detected. Press the OK button on the LCM control panel to start the copying.

Note: some drives may not be detected correctly. In that case, please leave the drive inside the unit and re-start the duplicator.
